Dear Hiring Team,

Introduction

I build software that shows its working, so people can trust what it decides. I came to software from hospitality, where I ran a busy café's ordering system, taught myself Python to automate stock counts, then went back to study computer science. I finished my Bachelor of Computer Science in 2020 and I am now a Software Engineer at Humongous Insurance in Auckland.

I am applying for the Backend Engineer role at Alpine Ski House. The chance to build booking and payment services for lift passes, lessons and rentals across four Southern Alps ski areas is what draws me, especially keeping those services steady when winter traffic arrives.

Why I Am a Good Fit

The role needs three or more years of backend development, and I have four years building backend services, including typed REST APIs in Node.js and PostgreSQL at Humongous Insurance and booking features at Margie's Travel. TypeScript and Node.js are central to the role, and I work in both: I rebuilt the claims portal with typed APIs and moved four Node.js services to AWS Lambda. The advert also asks for serverless or edge platform experience, which I have from moving four Node.js services to AWS Lambda and using Cloudflare Workers. Calm under pressure matters in a booking service, and my hospitality background running a busy café's ordering system taught me to stay steady when demand spikes.

Additional Information

I currently hold a valid open work visa valid until June 2028. I am available to start work after serving my 2-week notice period.

Kind regards,

Alex Rivera
