Dear Hiring Team,

Introduction

I came to software from hospitality, where I ran a busy café's ordering system and taught myself Python to automate the stock count. That led me to a computer science degree in 2020, and I have spent the last four years building web products, the last two at Humongous Insurance in Auckland. The principle I work by is simple: make the software show its working, so people can trust what it decides.

I am applying for the Software Engineer (TypeScript) role at Contoso. You build rostering and payroll software for 1,800 New Zealand hospitality and retail businesses, which is the world I came from, so the problems are familiar ones. Building shift planning and labour-cost forecasts that people rely on for their pay is a good use of what I have learned about showing how a system reaches its answer.

Why I Am a Good Fit

Your role asks for strong TypeScript and React, and I rebuilt the claims portal at Humongous in Next.js and React, which brought page load down from 4.1 to 1.3 seconds. You need Node.js and relational databases, which is what I use to design typed REST APIs and PostgreSQL schemas for the portal and two partner integrations. Writing tests is a habit of mine: I added Vitest and Playwright to a booking codebase that had none, and they caught release regressions before customers saw them. I also moved four Node.js services to AWS Lambda with GitHub Actions deployments, which covers the nice-to-have list.

Additional Information

I currently hold a valid open work visa valid until June 2028. I am available to start work after serving my 2-week notice period.

Kind regards,

Alex Rivera
