Dear Hiring Team,

Introduction

I came to software from hospitality, where I ran a busy café's ordering system and taught myself Python to automate the stock count. That led me back to study computer science, and I finished my degree in 2020. Four years on, I am a software engineer at Humongous Insurance in Auckland, and my rule has not changed: make the software show its working, so people can trust what it decides.

The Full Stack Developer role at Tailwind Traders is the one I want. Tailwind ships to every corner of Aotearoa from a Penrose warehouse with a 12-person team in house, which means the person writing checkout code can see it live on the site the same week. That is the work I want to do.

Why I Am a Good Fit

You ask for three or more years of full-stack JavaScript, and I have four, most of them in React and Next.js with Node.js and PostgreSQL behind them. The role calls for Next.js in production, which is what I do now: I rebuilt the claims portal at Humongous Insurance in Next.js and React and cut page load from 4.1 seconds to 1.3. Courier and payment providers would be new to me, but connecting outside systems is not, since I have designed typed Node.js and PostgreSQL APIs for the portal and two partner integrations. Accessibility also appears in the advert, and at Margie's Travel I took the booking flow through an accessibility audit and fixed what it found.

Additional Information

I currently hold a valid open work visa valid until June 2028. I am available to start work after serving my 2-week notice period.

Kind regards,

Alex Rivera
