Dear Hiring Team,

Introduction

Make the software show its working, so people can trust what it decides. That principle took me from running a café's ordering system, teaching myself Python to automate stock counts, to a computer science degree in 2020. I now work as a Software Engineer at Humongous Insurance in Auckland, four years into building software and two years into shipping language model features to production.

The Integration Developer role at Wide World Importers appeals because it joins systems that must agree: 60 suppliers, your warehouse, ERP and customers' ordering systems. I want to build the interfaces that keep those numbers straight.

Why I Am a Good Fit

The role asks for three or more years of backend or integration development, and I have four years building services with Node.js, TypeScript and SQL. The AWS serverless services you use match my production work moving four Node.js services to Lambda, using S3, and deploying through GitHub Actions. For parsing messy partner data, I built a claims-intake assistant where a language model read customer emails and attached documents, validated the output against schemas, and routed over 2,000 claims a month.

Additional Information

I currently hold a valid open work visa valid until June 2028. I am available to start work after serving my 2-week notice period.

Kind regards,

Alex Rivera
